PROJECTS

○ IoT Based Smart City Waste Management

It is a system that automatically monitors waste bins and the level of bins, and sends sms notification based on the status of collectors with the exact locations.

○ Autonomous Lawnmower

An autonomous lawnmower is a robotic device designed to automatically mow lawns without human intervention. It uses sensors to navigate and maintain grass height, making lawn maintenance more convenient and efficient. These devices are becoming increasingly popular for their time-saving and labor-reducing capabilities.

○ Retail Store Stock Inventory Analysis

It is an inventory analysis. helps retail stores to prevent product shortages and will help to monitor the needs of products and their trade values

○ Eye colour detection

This is a matlab program used to identify the colour of our eye. A camera is used to capture the image of the eye. Then the captured image is processed and as a result, the colour of the eye is identified.
